**WARNING**: This product must be installed by a licensed plumber or gas fitter when installed in the Commonwealth of Massachusetts.

**IMPORTANT**: Installation of a CO detector is required in the fireplace room when installed in the Commonwealth of Massachusetts.

**WARNING**: If the information in these instructions are not followed exactly, a fire or explosion may result, causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**IF YOU SMELL GAS:**
- Do not light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call gas supplier from a neighbor’s phone. Follow the gas supplier instructions.
- If you cannot reach your gas supplier, call the fire department.
- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

This appliance may be installed in an aftermarket permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only for use with the type(s) of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

---

Instructions on pages regarding installation and operation of the Direct Vent Fireplace. It includes warnings about proper installation, the need for CO detectors, and safety precautions if gas is detected. It also notes that the appliance must be used with the indicated type of gas and that a conversion kit is provided.
CONGRATULATIONS!

We welcome you as a new owner of a Kozy Heat gas fireplace. Kozy Heat products are designed with superior components and materials and assembled by trained craftsmen who take pride in their work. The burner and valve assembly are 100% test-fired and the complete fireplace is thoroughly inspected before packaging to ensure that you receive a quality product. Our commitment to quality and customer satisfaction have remained the same for over 30 years. We offer a complete line of gas and wood fireplaces, unique cabinets and stylish accessories to compliment any décor. Adding a fireplace is one of the best ways to increase the value of your home and we are proud to offer a network of dealers throughout the country to help make your experience everything you imagine. We pride ourselves in being dedicated to not only function and reliability, but customer safety as well. We offer our continual support and guidance to help you achieve the maximum benefit and enjoyment from your Kozy Heat gas fireplace.

Jim Hussong                                                            Dudley Hussong
President                                                                 Board Chairman

INTRODUCTION

Read this manual before installing or operating this appliance.
Please retain this owner’s manual for future reference.

Homeowner Reference Information

We recommend that you record the following information about your fireplace.

## WARRANTY
- Warranty 60-61
Installation and repair should be done only by a qualified service person. The appliance should be inspected by a qualified service person before use. Annual inspection by a qualified service person is required to maintain warranty. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is imperative that control compartments, burners and circulation air passageways of the appliance be kept clean.

If this appliance is installed directly on carpeting, tile or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the appliance.

Children and adults should be alerted to the hazards of high surface temperatures and should stay away to avoid burns or clothing ignition.

Young children should be carefully supervised when they are in the same room as the appliance.

Clothing or other flammable material should not be placed on or near the appliance.

Adequate accessibility clearances for servicing and proper operation must be maintained.

This appliance must not share or be connected to a chimney flue serving any other appliance.

Keep area around the appliance clear of combustible materials, gasoline and other flammable vapor and liquids.

The flow of combustion and ventilation air must not be obstructed.

Due to high temperatures the appliance should be located out of traffic and away from furniture and draperies.

The glass front or any part removed for servicing the appliance must be replaced prior to operating the appliance. Work should be done by a qualified service technician.

Clean glass only when cool and only with non-abrasive cleansers.

Do not operate this appliance with the glass/frame assembly removed, cracked or broken. The glass assembly, Part #PRC-057T, shall only be replaced as a complete unit, as supplied by Hussong Mfg. Co., Inc. Replacement of the glass assembly must only be performed by a licensed or qualified service person. DO NOT SUBSTITUTE MATERIALS.

Do not strike or slam glass assembly.

Any safety screen or guard removed for servicing the appliance must be replaced prior to operating the appliance.

Under no circumstances should any solid fuel (wood, coal, paper or cardboard etc.) be used in this appliance.

Keep burner and control compartment clean.

Do not use this fireplace if any part has been under water. Immediately call a qualified service technician to inspect this appliance and to replace any part of the control system and any gas control which has been under water.
### Features

#### Standard Features
- High efficiency
- High quality lifetime glass
  23-3/4” x 30-1/4” (603 mm x 768 mm)
- Quick latch glass frame assembly
- Upper grill / hood & lower grill (black)
- Accepts rigid pipe or Kozy Heat flexible vent system
- High - Low regulator
- Patented log design
- Automatic fan kit (2) - 75 CFM*
- Refractory brick lining
- Minnesota Energy Code compliant to 50 pascals

*Standard on RF models

#### Safety Features
- Each unit factory tested!
- Tested by OMNI - Test Laboratories
- Sealed combustion chamber with standing pilot ignition
- Removable millivolt board with 30-second delay pilot
- Automatic pressure relief glass system
- Requires no electricity to operate (excluding fan & light kit)
- Bedroom and mobile home approved

#### Optional Features
- Red brick refractory
- Back Light Kit
- Flex vent adaptor kit
- Automatic fan kit* with variable speed control (2) 75 CFM*
- Remote control* or thermostat remote control
- Wall mount thermostat / wireless wall mount thermostat
- Decorative full door faces in various styles and finishes
- Renaissance pattern front
- Mission design doors in various finishes
- Various cabinet & flush surrounds

*Standard on RF models

#### Weight
- Fireplace Weight (as packaged for shipment)
  183 lbs. (83.01 kg)
For all sidewall horizontally vented gas fueled equipment installed in every dwelling, building or structure used in whole or in part for residential purposes, including those owned or operated by the Commonwealth and where the side wall exhaust vent termination is less than (7) feet above finished grade in the area of the venting, including but not limited to decks and porches, the following requirements shall be satisfied:

**INSTALLATION OF CARBON MONOXIDE DETECTORS**

At the time of installation of the side wall horizontally vented gas fueled equipment, the installing plumber or gas-fitter shall observe that a hard wired carbon monoxide detector with an alarm and battery back-up is installed on the floor level where the gas equipment is to be installed. In addition, the installing plumber or gas-fitter shall observe that a battery operated or hard wired carbon monoxide detector is installed on each additional level of the dwelling, building or structure served by the side wall horizontal vented gas fueled equipment. It shall be the responsibility of the property owner to secure the services of qualified licensed professionals for the installation of hard wired carbon monoxide detectors.

In the event that the side wall horizontally vented gas fueled equipment is installed in a crawl space or attic, the hard wired carbon monoxide detector with alarm and battery back-up may be installed on the next adjacent floor level.

In the event that the requirements of this subdivision can not be met at the time of completion of installation, the owner shall have a period of thirty (30) days to comply with the above requirements; provided, however, that during said thirty (30) day period, a battery operated carbon monoxide detector with an alarm shall be installed.

**APPROVED CARBON MONOXIDE DETECTORS**

Each carbon monoxide detector as required in accordance with the above provisions shall comply with NFPA 720 and be ANSI/UL 2034 listed and IAS certified.

**SIGNAGE**

A metal or plastic identification plate shall be permanently mounted to the exterior of the building at a minimum of eight (8) feet above grade directly in line with the exhaust vent terminal for the horizontally vented gas fueled heating appliance or equipment. The sign shall read, in print no less the one-half inch (1/2) in size, “GAS VENT DIRECTLY BELOW. KEEP CLEAR OF ALL OBSTRUCTIONS”.

**INSPECTION**

The state or local gas inspector of the side wall horizontally vented gas fueled equipment shall not approve the installation unless, upon inspection, the inspector observes carbon monoxide detectors and signage installed in accordance with the provisions of 248 CMR 5.08 (2) (a) 1 through 4.

**EXEMPTIONS**

The following equipment is exempt from 248 CMR 5.08 (2) (a) 1 through 4: The equipment listed in Chapter 10 entitled “Equipment Not Required To Be Vented” in the most current edition of NFPA 54 as adopted by the Board; and Product Approved side wall horizontally vented gas fueled equipment installed in a room or structure separate from the dwelling, building or structure used in whole or in part for residential purposes.

**MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM PROVIDED**

When the manufacturer of Product Approved side wall horizontally vented gas equipment provides a venting system design or venting system components with the equipment, the instructions provided by the manufacturer for installation of the equipment and the venting system shall include:

- Detailed instructions for the installation of the venting system design or the venting system components; and
- A complete parts list for the venting system design or venting system.

**MANUFACTURER REQUIREMENTS - GAS EQUIPMENT VENTING SYSTEM NOT PROVIDED**

When the manufacturer of Product Approved side wall horizontally vented gas equipment does not provide the parts for venting the flue gases, but identifies “special venting systems”, the following requirements shall be satisfied by the manufacturer:

- The referenced “special venting systems” instructions shall be included with the appliance or equipment installation instructions and;
- The “special venting systems” shall be Product Approved by the Board, and the instructions for that system shall include a parts list and detailed installation instructions.

A copy of all installation instructions for all Product Approved side wall horizontally vented gas fueled equipment, all venting instructions, all parts lists for venting instructions, and/or all venting design instructions shall remain with the appliance or equipment at the completion of the installation.

**WARNING:**

NON-COMBUSTIBLE ZONE:

STAND-OFFS PROVIDE THE 10" (254 mm) MINIMUM CLEARANCE TO HEADER. USE ONLY NON-COMBUSTIBLE MATERIAL IN THIS AREA FOR THE ENTIRE WIDTH OF FIREPLACE. DO NOT USE WOOD, SHEET-ROCK ETC. IN THIS ZONE.

**NOTE:** OTHER CLEARANCES APPLY. ALL CLEARANCES MUST BE MAINTAINED. REFER TO PAGE 14 FOR MORE INFORMATION.

**CAUTION:** STAND-OFF BRACKETS ARE NOT LOAD BEARING.
**SPECIFICATIONS**

**WARNING:** TOP STAND-OFF BRACKET MUST BE ATTACHED TO FIREPLACE. DO NOT REMOVE.

**CAUTION:** STAND-OFF BRACKETS ARE NOT LOAD BEARING.

**CLEARANCES**

- From fireplace face top to framing: 10" (254 mm)
- From fireplace left & right sides & back: 1/2" (13 mm)
- Surround sides (flush): 5/8" (13 mm)
- Fireplace bottom to flooring: 0 (0 mm)
- Fireplace top to ceiling: 31" (787 mm)
- Fireplace side to adjacent sidewall: 10" (254 mm)
- Fireplace front: 36" (914 mm)
- Mantel 10" (254 mm) deep from top of fireplace: 15" (381 mm)
## SPECIFICATIONS

### MODEL #PRC-36 COMPONENTS LIST

- (#PRC-770) - Millivolt Board Assembly with 18” Flexible Gas Line attached
- (#700-203) - Manual Gas Shut-off Valve
- (#PRC-135) - Burner / Log Grate Assembly
- (#PRC-G900) - Refractory Set
- (#PRC-500) - Log Package
- (#PRC-057T) - Glass Frame Assembly
- (#OCK-S5271) - LP Conversion Kit
- (#600-083) - Receptacle / Speed Control Assembly with (3) Wire Nuts
- (#942085) - 5” Restrictor Plate
- (#500-PRC) - Grill Assembly: Upper Hood, Upper Louver, Lower Grill

### MODEL #PRC-36-RF COMPONENTS

- (#PRC-800-RF) - Millivolt Board Assembly with 18” Flexible Gas Line attached
- (#700-203) - Manual Gas Shut-off Valve
- (#PRC-135) - Burner / Log Grate Assembly
- (#PRC-G900) - Refractory Set
- (#PRC-500) - Log Package
- (#PRC-028-RF) - RF Fan Kit
- (#PRC-057T) - Glass Frame Assembly
- (#OCK-H5271L-RF) - LP Conversion Kit
- (#700-108) - Remote control
- (#942085) - 5” Restrictor Plate
- (#500-PRC) - Grill Assembly: Upper Hood, Upper Louver, Lower Grill

### INSTALLATION OVERVIEW

1. Frame an opening for the fireplace, allowing for vent installation and type of installation (corner, flat wall application).
2. If masonry (optional) will be used, prepare foundation for the masonry load. A lintel is required to support the added weight above the fireplace.
3. Attach nailing flanges to fireplace.
4. Insert fireplace into framing.
5. Install the hearth (if applicable).
6. Complete the gas line installation.
7. Complete the electrical hook-up. Install any standard or optional electrical components at this time.
8. Complete the venting installation.
9. Secure fireplace to flooring through holes located in the outer box bottom and to framing with nailing flanges. Verify all clearances at this point.
10. Install facing material, mantel or cabinetry, allowing room for optional full face doors, if applicable.
11. Install logs.
12. Install grills and optional decorative doors / faces.
13. Verify proper operation of fireplace and all components.

### PLACEMENT CLEARANCE REQUIREMENTS

- This fireplace must be installed on a level surface capable of supporting the fireplace and venting.
- Fireplace must be placed directly on wood or non-combustible surface (not linoleum or carpet) extending the entire depth and width of fireplace.
- Due to high surface temperatures, fireplace should be located out of traffic and away from furniture and draperies.
- This fireplace may be installed in a bedroom.
- Please be aware of the large amount of heat this fireplace will produce when determining a location.

NOTE: The qualified installer should follow the procedure best suited for the installation.
The top stand-off brackets are attached to the fireplace top in a flat state for shipping.

1. Remove and save the (4) screws securing stand-off heat shield and stand-off brackets.
2. Remove (4) screws located under stand-off brackets.
3. Form each stand-off bracket as shown.
4. Re-attach stand-off brackets to fireplace using screws previously removed.

**WARNING:** NON-COMBUSTIBLE ZONE:
STAND-OFFS PROVIDE THE 10” (254 mm) MINI-
MUM CLEARANCE TO HEADER. USE ONLY NON-
COMBUSTIBLE MATERIAL IN THIS AREA FOR
THE ENTIRE WIDTH OF FIREPLACE. DO NOT USE WOOD,
SHEETROCK ETC. IN THIS ZONE.

**NOTE:** OTHER CLEARANCES MUST BE MAIN-
TAINED. REFER TO PAGE 14 FOR MORE INFOR-
MATION.
PREPARE THE FIREPLACE

HORIZONTAL VENT HEAT SHIELD INSTALLATION

IMPORTANT: THE HORIZONTAL VENT HEAT SHIELD MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS

To Install Horizontal Vent Heat Shield:
1. Loosen, but do not remove center three screws at the back of fireplace.
2. Bend the horizontal heat shield at perforation to a 45° angle. Slide (3) slots on horizontal vent heat shield under loosened screws. Re-tighten screws.

NAILING FLANGE ASSEMBLY & INSTALLATION

1. Remove the (4) nailing flanges from fireplace sides.
2. With the 1/4” (6 mm) stand-offs on the nailing flanges facing away from fireplace, align nailing flange with the holes on the outside corners of fireplace. Secure with screws (provided in installation manual parts packet) through the slots in the nailing flanges.
3. Bend perforation on nailing flange until parallel with fireplace face. Do not bend toward fireplace face.
4. Position framing stud against 1/4” (6 mm) stand-offs located on the backside of nailing flanges. Secure with nails or screws.

NOTE: Depending on facing material, tabs can be adjusted forward or back up to 1/2” (13 mm).

When installed, nailing flanges provide the minimum 1/4” (6 mm) clearance from fireplace sides.

CAUTION: NEVER PERMANENTLY REMOVE THESE ASSEMBLIES FROM THE FIREPLACE - THEY MUST BE SECURED IN PLACE REGARDLESS OF FINISH MATERIAL USED.
FRAMING

WALL ENCLOSURE ROUGH OPENING

IMPORTANT: Framing dimensions should allow for wall covering thickness and fireplace facing materials. If using a hearth, adjust rough opening size as necessary to maintain at least the minimum clearance requirements.

IMPORTANT: NON-COMBUSTIBLE FACING MATERIAL MAY BE APPLIED OVER (BUT NOT DIRECTLY TO) FIREPLACE FACE. THIS WILL PREVENT THE FACING MATERIAL FROM FALLING OFF DUE TO EXPANSION OF THE FACE WHEN HEATED. DO NOT OBSTRUCT THE FLOW OF VENTILATION AIR.

MINIMUM FINISHED OPENING DIMENSIONS

HORIZONTAL VENTING

42"(1067 mm) High x 36-3/8"(924 mm) Wide x 21-7/8" (556 mm) Deep.

1/2" (13 mm) clearance at back and sides of fireplace must be maintained.

VERTICAL VENTING

42"(1067 mm) High x 36-3/8"(924 mm) Wide x 23-7/8" (607 mm) Deep.

2-1/2" (64 mm) clearance at back to maintain vent system clearance and 1/2" (13 mm) at sides of fireplace must be maintained.

NOTE: Provide adequate clearance in front of fireplace to operate lower grill, open and close optional decorative doors / full door faces, access the control valve, installation of gas line, fan, etc.

WARNING: DO NOT OBSTRUCT UPPER AND LOWER GRILL OPENINGS. ROOM AIR ENTERS THROUGH THE LOWER PASSAGE, IS HEATED AND EXITS THROUGH THE UPPER PASSAGE. BLOCKING THESE PASSAGES MAY RESULT IN OVERHEATING, CREATING A POTENTIALLY HAZARDOUS SITUATION.

Illustration at right requires a minimum 5" (127 mm) exterior wall depth when using minimum horizontal venting. Anything less than a 5" (127 mm) exterior wall depth requires that you add that depth to the 21-7/8" (556 mm) dimension for horizontal terminations to accommodate minimum venting.
Determine the exact position of your fireplace, including hearth height, width, and depth, (if applicable). If possible, place fireplace in such a manner that the vent termination will be placed between two studs, eliminating the need for additional framing.

If masonry is to be used (optional), prepare the necessary foundation for the masonry load. When masonry construction is being used, a lintel must be used over the top of fireplace to support the added weight.

### HEARTH EXTENSION REQUIREMENTS

**NOTE:** Consider height of hearth finish material (stone, brick, etc.) when building fireplace platform. The bottom of the fireplace must be level with finished hearth to allow for lower grill operation and proper fit of optional decorative full door faces.

**WARNING:** Install fireplace on hard metal or wood surface extending the full width and depth of fireplace. Minimum platform size: 35-7/8” (911 mm) wide x 21-3/8” (543 mm) deep.

**FIRE HAZARD:** Do NOT install directly on carpeting, vinyl, or any combustible material other than wood.

Non-combustible material (36” (914 mm) wide x 14” (357 mm) deep) required in front of fireplace when fireplace is raised less than 2 inches.

If hearth is to be made of combustible material it must have a minimum height of 2” (51 mm) and a maximum depth of 6” (152 mm).

**IMPORTANT:** Vent cap location must be in compliance with the guidelines on page #29 of this manual.

### VERTICAL TERMINATIONS

Follow vent pipe manufacturer’s installation instructions for vertical terminations. A minimum 1” (25 mm) clearance on all sides of vertical vent pipe must be maintained.

The included Horizontal Vent Heat Shield is not used for vertical configurations.

### HORIZONTAL TERMINATIONS

Follow vent pipe manufacturer’s installation instructions for horizontal terminations. Include the required 1-1/2” (38 mm) top clearance and 1” (25 mm) sides and bottom clearances for approved rigid vent systems and the Kozy Heat #800 series flexible vent system.

### MINIMUM HORIZONTAL FRAMING DIMENSIONS

**CAUTION:** Cold air transfer area. The surrounding fireplace chase must comply with all clearances as outlined in this manual and be constructed in compliance with local building codes. Outside walls should be insulated to prevent cold air from entering room.

**CAUTION:** Due to high temperatures, this fireplace should be located out of traffic areas and away from furniture and draperies.
TYPICAL INSTALLATION OPTIONS

IMPORTANT: KOZY HEAT WALL THIMBLE PASS-THRU (#800-WPT or #800-WPT2) MUST BE USED ON ALL HORIZONTAL VENT RUNS. FOLLOW INSTRUCTIONS ON PAGE 21 OF THIS INSTALLATION MANUAL.

IMPORTANT: THE HORIZONTAL HEAT SHIELD INCLUDED WITH THIS FIREPLACE MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW DIRECTLY OFF THE TOP OF UNIT TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS.

NOTE: HORIZONTAL VENT HEAT SHIELD NOT SHOWN FOR CLARITY PURPOSES ONLY.

Illustration at right requires a minimum 5” (127 mm) exterior wall depth when using minimum horizontal venting. Anything less than a 5” (127 mm) exterior wall depth requires that you add that depth to the 21-7/8” (556 mm) dimension to accommodate minimum venting.

TYPICAL HORIZONTAL INSTALLATION

5” (127 mm) exterior wall depth shown

3" clearance - sides

21 7/8” * 556mm

36 5/8” 924mm

TYPICAL CORNER INSTALLATION

Illustration at right requires a minimum 5” (127 mm) exterior wall depth when using minimum horizontal venting. Anything less than a 5” (127 mm) exterior wall depth requires that you add that depth to the 21-7/8” (556 mm) dimension to accommodate minimum venting.

TYPICAL VERTICAL INSTALLATION

2 1/2” 64mm

23 7/8” 606mm
WARNING: TOP STAND-OFF BRACKETS MUST BE ASSEMBLED AND ATTACHED TO FIREPLACE. DO NOT REMOVE.

CAUTION: STAND-OFF BRACKETS ARE NOT LOAD BEARING.

NON-COMBUSTIBLE ZONE: NO MATERIALS ALLOWED ON TOP OF THE FIREPLACE WITHIN THE SHADOWED AREA FOR THE ENTIRE WIDTH AND DEPTH OF THE FIREPLACE. THIS AIR SPACE MUST REMAIN OPEN.

NON-COMBUSTIBLE MATERIAL ONLY

19" (483mm)
17" (432mm)
15" (381mm)
10" (254mm)

3/8" (19mm)
**REMOVE GLASS FRAME ASSEMBLY**

CAUTION: TO PREVENT THE GLASS FRAME ASSEMBLY FROM FALLING FROM THE FIREPLACE AND BECOMING DAMAGED, FOLLOW THESE INSTRUCTIONS EXACTLY WHEN REMOVING GLASS FRAME ASSEMBLY.

A. Locate the spring-loaded handles securing glass frame assembly at the top & bottom of firebox.

B. Pull bottom handles out and ‘down’ to release glass frame assembly bottom.

C. Pull top handles out and ‘up’ to release glass frame assembly top.

D. Remove glass frame assembly from fireplace.

---

**INSTALL GLASS FRAME ASSEMBLY**

CAUTION: TO PREVENT GLASS FRAME ASSEMBLY FROM FALLING OFF WHEN INSTALLING, SECURE TOP GLASS LATCH BRACKETS BEFORE SECURING BOTTOM BRACKETS.

A. Place glass frame assembly onto fireplace front.

B. Pull top handles out and ‘down’ to secure glass frame assembly top.

C. Pull bottom handles out and ‘up’ to secure glass frame assembly bottom.

---

**WARNING:** DO NOT OPERATE THIS FIREPLACE WITH THE GLASS REMOVED, CRACKED OR BROKEN. REPLACEMENT OF GLASS FRAME ASSEMBLY, #PRC-057T SHOULD BE DONE BY A LICENSED OR QUALIFIED SERVICE PERSON.

**WARNING:** DO NOT REMOVE GLASS ASSEMBLY WHEN HOT!
INSTALLATION OF THIS FAN SHOULD BE DONE ONLY BY A QUALIFIED INSTALLER

WARNING: MAKE SURE HOUSEHOLD BREAKER IS SHUT OFF PRIOR TO WORKING ON ANY ELECTRICAL LINES.

IMPORTANT: If installing a fan, it is easier to complete before the millivolt board is connected to the gas line. Wiring must be done before enclosing fireplace sides. An electrical box and romex connector are pre-installed on a removable panel on the right side of fireplace. A receptacle / speed control assembly and (3) wire nuts are included in the fireplace components packet.

The optional fan kit #TRF-028 includes:

(2) 75 CFM fan with temperature control switch and 4 ft. (1219 mm) fan cord

NOTE: Code approved line voltage wiring 14 gauge or better must be used when wiring this assembly. Refer local electrical codes for specific requirements.

WARNING: THIS APPLIANCE IS EQUIPPED WITH A THREE-PRONG (GROUNDING) PLUG FOR PROTECTION AGAINST SHOCK HAZARD AND SHOULD BE PLUGGED DIRECTLY INTO A PROPERLY GROUNDED THREE-PRONG RECEPTACLE. DO NOT CUT OR REMOVE THE GROUNDING PRONG FROM THIS PLUG.

The following components must be removed from the fireplace prior to installation of this fan. Refer to the corresponding pages in this installation manual for assistance if necessary.

A. Upper hood, upper louver & lower grill, if installed. Page 36.
OPTIONAL FAN INSTALLATION (PRC-36 only)

1. Insert fans through the lower grill opening, push to the back, positioning behind legs.

2. Connect fan wiring by attaching connectors on right fan onto terminals on left fan.

3. From inside the lower right grill opening, loosen screw securing removable access panel (with electrical box & romex connector installed). Remove panel.

4. Insert 110V - 120V wiring (with ground) through romex connector and wire to the speed control / receptacle assembly, matching the black (hot), white (neutral), and green (ground) wires to the corresponding wires on the speed control / receptacle assembly.

5. Secure speed control / receptacle assembly to the electrical box with (2) screws provided.

6. Re-install electrical access panel. Tighten screw.

7. Attach the temperature control switch to the bottom of firebox.

8. Plug cord into the electrical box receptacle.

9. Turn speed control counter-clockwise until it ‘clicks’. This is the ‘OFF’ position.

10. Turn speed control ‘ON’ by turning knob clockwise past the ‘click’ - this is the highest setting.

11. Re-install glass assembly. Refer to page 15 of this installation manual if necessary.

12. Re-install lower grill, upper louver & upper hood. Refer to page 36 of this installation manual if necessary.

NOTE: Speed control / receptacle assembly & (3) wire nuts are included in the fireplace components packet.

TEMPERATURE CONTROL SWITCH POSITION

Before adjusting the temperature control switch, unplug the 3-prong plug on the fan cord from the receptacle. Adjust position of the temperature control switch to a warmer location under the firebox to turn fan ‘ON’ sooner or move it to a cooler location under firebox to turn the fan ‘ON’ later. The fan will turn on when the sensor in the temperature control switch reaches 110° F and will turn ‘OFF’ when the sensor reaches 90° F. After adjustment, plug the 3-prong plug on fan cord into the receptacle.

NOTE: This appliance must be electrically grounded and connected in accordance with local codes, or in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 Current Edition, or the Canadian electrical Code CSA C22.1.

NOTE: This fan will not operate unless the speed control has been turned ‘ON’ and sufficient heat has been applied to the temperature control switch. The fan will turn ‘ON’ and ‘OFF’ automatically as the fireplace heats and cools. Adjust fan to desired speed while it is running.
ATTENTION: The conversion shall be carried out in accordance with the requirements of the provincial authorities having jurisdiction and in accordance with the requirements of the ANSI Z223.1 installation code.

CAUTION: Installation of the gas line must only be done by a qualified person in accordance with local building codes, if any. If not, follow ANSI 223.1.

Commonwealth of Massachusetts: Installation must be done by a licensed plumber or gas fitter.

NOTE: A listed (and Commonwealth of Massachusetts approved) 12” (13 mm) T-handle manual shut-off valve and flexible gas connector (included) are connected to the 1/2” (13 mm) control valve inlet. If substituting for these components, please consult local codes for compliance.

NOTE: This fireplace is equipped with a 3/8”(10 mm) x 18” (457 mm) long flexible gas connector and manual shut-off valve. The gas line should be run to the point of connection where the shut-off valve and flexible gas line will connect.

NOTE: The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at pressures in excess of ½ psi.

NOTE: The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas line at test pressures equal to or less than ½ psi (3.5 kPa).

NOTE: For high altitude installations, consult the local gas distributor or the authority having jurisdiction for proper rating methods.

IMPORTANT: The efficiency rating of this appliance is a product of thermal efficiency rating determined under continuous operating conditions and was determined independently of any installed system.

If desired, a thermostat (wireless style also available), wall switch, or remote control assembly may be used to turn the fireplace ‘OFF’ and ‘ON’. Only ONE of these may be installed. Follow instructions included with each assembly.

**OPTIONAL:**
Disconnect ON/OFF rocker switch wires from the back of gas valve.

**WALL SWITCH / THERMOSTAT:**

Run low-voltage (thermostat) wires from terminals on the gas valve to the desired location of wall switch or thermostat.

Attach the appropriate connectors to wall switch / thermostat wires and connect to the top and bottom terminals marked TH / TPTH on the gas valve.

**REMOTE CONTROL:**

Follow instructions included with the remote control.

**NOTE:** INSTALLATION OF THERMOSTAT OR WALL SWITCH SHOULD ONLY BE DONE BY A QUALIFIED INSTALLER.

**IMPORTANT:** The insulated cover included with the remote control must be placed over the remote receiver to prevent overheating.

**NOTE:** The fireplace must be turned ‘ON’ and ‘OFF’ by the same method. For example: If fireplace is turned ‘ON’ by the remote control, it must be turned ‘OFF’ by the remote control.

**NOTE:** If ON/OFF rocker switch wires are not disconnected, the ON/OFF rocker switch on the millivolt board must be in the ‘OFF’ position for proper operation of any of these components.

If rocker switch is ‘ON’, the fireplace burner will operate until it is turned ‘OFF’ by the rocker switch. A wall switch, thermostat, or remote control will not turn the fireplace ‘OFF’ when it has been turned ‘ON’ by the rocker switch.
For each additional 90° elbow used after the first elbow, 3 ft. (914 mm) must be subtracted from the maximum allowed venting.

For each 45° elbow used, 1-1/2 ft. (457 mm) must be subtracted from the maximum venting allowed.

IMPORTANT: Consult the local and national installation codes to assure adequate combustion and ventilation air is available.

Refer to the vent systems manufacturer’s installation manual for complete installation instructions. Installation must conform with the venting requirements and restrictions as outlined in this manual.

APPROVED VENTING

Simpson Dura-Vent DV-GS 5" x 8" direct vent system (horizontal and vertical terminations).
Ameri-Vent Direct Chimney System 5" x 8" (horizontal and vertical terminations).
Metal Fab Direct Chimney System 5" x 8" (horizontal and vertical terminations).
ICC Direct Chimney Systems 5" x 8" (horizontal and vertical terminations).
Selkirk-Metalbestos Chimney Systems 5" x 8" (horizontal and vertical terminations).
Kozy Heat #800 series flexible vent system (horizontal terminations).

HORIZONTAL VENT SYSTEM CLEARANCES

<table>
<thead>
<tr>
<th>ALL APPROVED VENTING</th>
<th>TOP</th>
<th>BOTTOM</th>
<th>SIDES</th>
</tr>
</thead>
</table>

HORIZONTAL TERMINATIONS

MINIMUM: 45° elbow + 6" (152 mm) horizontal + termination cap.

MAXIMUM:
OPTION #1: 45° elbow + 5 ft. (1.52 mm) + termination cap.
OPTION #2: 6" + 45° elbow + 10 ft. (3.05 m) + termination cap.

IMPORTANT: THE HORIZONTAL VENT HEAT SHIELD MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW DIRECTLY OFF FIREPLACE TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS

THE KOZY HEAT WALL PASS-THRU, PART #800-WPT (4-1/2" (114 mm) - 6-1/2" (165 mm) ) WALL THICKNESS OR #800-WPT2 (6-1/2" (165 mm) - 12-1/2" (318 mm) ), MUST BE USED ON ALL HORIZONTAL VENT RUNS.

RESTRICTOR

A restrictor is included in fireplace components packet.

Each installation is unique and affected by various factors including venting configuration, altitude and climate. Therefore, after fireplace installation is complete a restrictor may be required or may need to be removed or modified.

Please refer to page 25 for installation instructions if installing the restrictor in conjunction with the venting.

Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.

ELBOWS

For each additional 90° elbow used after the first elbow, 3 ft. (914 mm) must be subtracted from the maximum allowed venting. For each 45° elbow used, 1-1/2 ft. (457 mm) must be subtracted from the maximum venting allowed.

NOTE: (2) 45° degree elbows may be used in place of (1) 90° elbow.

IMPORTANT: Flame height and appearance will vary depending upon venting configuration and type of fuel used. Venting requirements apply to both Natural and LP gas.
#800-WPT WALL PASS-THRU

**IMPORTANT:** #800-WPT or #800-WPT2 WALL PASS-THRU MUST BE USED ON ALL HORIZONTAL VENT TERMINATIONS. THIS INCLUDES BOTH INTERIOR AND EXTERIOR WALLS. FOLLOW INSTRUCTIONS BELOW.

**HORIZONTAL TERMINATIONS CLEARANCES**

TOP: 3” (76 mm)   SIDES & BOTTOM: 1” (25 mm)

**FRAMING DIMENSIONS FOR #800-WPT KOZY HEAT WALL PASS-THRU**

12-1/2” (318 mm) HIGH x 10-7/8” (276 mm) WIDE

**WARNING:** MAINTAIN ALL CLEARANCES AS STATED IN THIS INSTALLATION MANUAL.

**IMPORTANT:** If using the Kozy Heat series flexible vent system, remove the inner ring on each wall thimble section with a tin snips. This will provide adequate room for the flexible vent system.

A. Measure wall thickness; cut insulation panel (included) this length.

B. Install wall pass-thru section marked #1 (with 3/8” (10 mm) flange) into framed opening. Secure to interior wall with screws (not provided).

C. From the exterior, place insulation between flange and top of framed opening in wall pass-thru section #1.

D. Install section marked #2 of wall pass-thru into framed opening, overlapping the metal sections as necessary to accommodate wall thickness. Secure to exterior wall with screws (not provided).

![Diagram of venting installation](image-url)

CUT RING OUT OF BOTH SECTIONS IF USING #800 SERIES FLEX VENTING.
NOTE: Horizontal sections require 1/4" (6 mm) rise for every 12" (305 mm) of travel.

CAUTION: This gas appliance must not be connected to or joined with any other chimney flue serving another appliance.

IMPORTANT: THE HORIZONTAL VENT HEAT SHIELD MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW DIRECTLY OFF FIREPLACE TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS

THE KOZY HEAT WALL PASS-THRU, PART #800-WPT (4-1/2" (114 mm) - 6-1/2" (165 mm) WALL THICKNESS) OR #800-WPT2 (6-1/2" (165 mm) - 12-1/2" (318 mm) WALL THICKNESS), MUST BE USED ON ALL HORIZONTAL VENT RUNS.

MAXIMUM HORIZONTAL VENTING: OPTION #1

MAXIMUM HORIZONTAL VENTING: OPTION #2

NOTE: Page 25 has information on restrictor installation in conjunction with venting installation. Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.
VENTING

HORIZONTAL TERMINATIONS

TYPICAL CORNER INSTALLATION

45° elbow + 90° elbow + horizontal pipe + termination cap.

VENTING DIMENSIONS FOR MINIMUM CORNER INSTALLATIONS

Vent Opening Dimensions: Refer to vent pipe manufacturer’s instructions.

NOTE: Horizontal sections require 1/4" (6 mm) rise for every 12" (305 mm) of travel.

CAUTION: This gas appliance must not be connected to or joined with any other chimney flue serving another appliance.

NOTE: Page 25 has information on restrictor installation in conjunction with venting installation. Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.

THE KOZY HEAT WALL PASS-THRU, PART #800-WPT (4-1/2" (114 mm) - 6-1/2" (165 mm) WALL THICKNESS) OR #800-WPT2 (6-1/2" (165 mm) - 12-1/2" (318 mm) WALL THICKNESS), MUST BE USED ON ALL HORIZONTAL VENT RUNS.

RESTRICCTOR

A restrictor is included in fireplace components packet.

Each installation is unique and affected by various factors including venting configuration, altitude and climate. Therefore, after fireplace installation is complete a restrictor may be required or may need to be removed or modified.

Please refer to page 25 for installation instructions if installing the restrictor in conjunction with the venting.

Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.

HORIZONTAL & VERTICAL COMBINATION TERMINATIONS

MAXIMUM: 10 ft. (3.05) horizontal + 15 ft. (4.57 m) vertical + cap. 25 ft (7.62m) total.

ELBOWS

For each additional 90° elbow used after the first elbow, 3 ft. (914 mm) must be subtracted from the maximum allowed venting. For each 45° elbow used, 1-1/2 ft. (457 mm) must be subtracted from the maximum venting allowed.

NOTE: (2) 45° degree elbows may be used in place of (1) 90° elbow.

IMPORTANT: THE HORIZONTAL VENT HEAT SHIELD MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW DIRECTLY OFF FIREPLACE TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS

THE KOZY HEAT WALL PASS-THRU, PART #800-WPT (4-1/2" (114 mm) - 6-1/2" (165 mm) WALL THICKNESS) OR #800-WPT2 (6-1/2" (165 mm) - 12-1/2" (318 mm) WALL THICKNESS), MUST BE USED ON ALL HORIZONTAL VENT RUNS.
CAUTION: This gas appliance must not be connected to or joined with any other chimney flue serving another appliance.

**VERTICAL TERMINATIONS**

**MINIMUM VERTICAL VENTING**

- TERMINATION CAP
- 2 ft. (610 mm)
- 45° ELBOW

**MAXIMUM VERTICAL VENTING**

- TERMINATION CAP
- 30 ft. (9.14 m)
- 45° ELBOW

**RESTRICTOR INSTALLATION**

**TO BE USED AT INSTALLER DISCRETION.**

- Large Restrictor
- Remove tab(s) to create small restrictor
- Bend tabs to approx. 80 degree angles to create tension to hold itself in place when installed.
- Slide restrictor into exhaust pipe on top of fireplace with tabs pointing towards you prior to attaching venting.

**NOTE:** Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.
VENTING (Horizontal & Vertical Combination)

HORIZONTAL / VERTICAL COMBINATION:
(4.57m) 15' Vertical
(3.05m) 10' Horizontal

Termination must be within shaded area

NOTE: Page 25 has information on restrictor installation in conjunction with venting installation.

Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.

Horizontal sections require 1/4" (6 mm) rise for every 12" (305 mm) of travel.

For each additional elbow used after the first elbow, 3 ft. (914 mm) must be subtracted from the maximum venting allowed. For each 45° elbow used, 1-1/2 ft. (457 mm) must be subtracted from the maximum venting allowed.

(2) 45° degree elbows may be used in place of (1) 90° elbow.

IMPORTANT: THE HORIZONTAL VENT HEAT SHIELD MUST BE INSTALLED WHEN USING A 45-DEGREE ELBOW DIRECTLY OFF FIREPLACE TO HORIZONTALLY POSITION THE VENT SYSTEM. EXCEPTION: CORNER INSTALLATIONS

THE KOZY HEAT WALL PASS-THRU, PART #800-WPT (4-1/2" (114 mm) - 6-1/2" (165 mm) WALL THICKNESS) OR #800-WPT2 (6-1/2" (165 mm) - 12-1/2" (318 mm) WALL THICKNESS), MUST BE USED ON ALL HORIZONTAL VENT RUNS.
**INSTALLATION OF #800 SERIES DIRECT VENT TERMINATION KIT(S)**

**IMPORTANT:** The flex pipe is permanently attached to the exterior plate. **DO NOT ATTACH #844 or #845 termination kit to fireplace (or extension kit) until it has passed through the wall. Install termination plates to outside wall exterior.**

**HORIZONTAL TERMINATIONS**  Refer to illustration on following page.

IF TERMINATING AGAINST VINYL SIDING, A VINYL SIDING PROTECTOR, INCLUDED WITH THE #844 AND #845 DIRECT VENT KITS, MUST BE USED. FOLLOW INSTRUCTIONS INCLUDED.

**IMPORTANT:** The Kozy Heat wall pass-thru, part #800-WPT or #800-WPT2, must be used on all horizontal vent applications regardless of which vent system you are using.

**CAUTION:** This gas appliance must not be connected to a chimney flu serving another type of appliance.

**NOTE:** Page 25 has information on restrictor installation in conjunction with venting installation. Page 50 has information on restrictor recommendations depending on burner flame appearance and instructions on installation after venting is completed.

1. **If your vent system application does not require an extension kit, proceed to step #7.**

2. **If your vent system application will require one or more extension kits (Part #846), proceed with the following steps.** Each #846 extension kit contains enough 5” & 8” flexible aluminum to extend the chimney an additional 6’ (1.83 m).

3. **Gently stretch 5” & 8” flexible aluminum pipes on the termination kit (#844 or #845) and on each extension kit (if used) the length required for your installation.**

4. **IMPORTANT: DO NOT STRETCH EXTENSION KIT BEYOND 6’ (1.83 m). DO NOT STRETCH BEYOND WHAT IS REQUIRED - IT IS VERY DIFFICULT TO RECOMPRESS THE FLEX PIPES ONCE STRETCHED.**

5. **If additional extension kits are required, repeat steps #4 - #5, placing 5” & 8” pipes onto the previous extension kit.**

6. **Attach the vinyl siding protector (G).**

7. **With the spacer legs toward the wall, slide the interior firestop (H) over the 8” pipe and attach to the interior wall (over wall materials).**

**NOTE:** Attachment brackets are included with the termination kit. These optional brackets should be screwed or nailed (not provided) onto the top and bottom of the 9-1/2” (241 mm) H x 9-1/2” (241 mm) W opening on the exterior of the house. The termination plates then fit between these brackets. Using screws provided, secure brackets to the termination box (A). Attach the vinyl siding protector (G).
8. Apply a liberal bead of exterior sealant around the outer edge of termination box (A), placing the assembly through opening in exterior wall. Place screws through the four slots (B), securing it in place.

9. Gently pull 5” & 8” pipes down to the top of extension kit, or top of fireplace if no extension kits were used.

10. Place a bead of sealant outside 5” flex pipe collar (C) and slide it into 5” pipe on the extension kit or top of fireplace (D). Secure with 3 evenly spaced screws.

11. Place a bead of sealant inside 8” flex pipe collar (E) and slide it over 8” pipe on the extension kit or top of fireplace (F). Secure with 3 evenly spaced screws.

12. **OPTIONAL**: Place insulation between 8” pipe and wall studs.

**VENTING (Flexible #800 Series cont.)**
TERMINATION VENT CAP LOCATION

This gas appliance must not be connected to a chimney serving any other appliance.

1. Terminations against vinyl siding must use a vinyl siding protector. Follow instructions included.
2. DO NOT RECESS TERMINATION KIT INTO OUTSIDE BUILDING MATERIALS - i.e.: brick, stone, siding, etc.
   If necessary, extend framing so that termination kit will be exposed once building materials are installed.
3. Vent termination must not be located where it will become plugged by snow or other material. The flow of combustion and ventilation air must be not obstructed.

LOCATION CLEARANCES

A. Above grade, veranda, porch, deck, balcony - 12” (305 mm).
B. Operable window or door - CANADA: 12” (305 mm). US: 9” (229 mm).
C. Permanently closed window* - 12” (305 mm) (recommended to prevent condensation on window).
D. Ventilated soffit* - 24” (610 mm).
E. Unventilated soffit* - 12” (305 mm).
F. Outside corner* - 12” (305 mm).
G. Inside corner* - 12” (305 mm).
H. Meter / Regulator: Not to be installed above a gas meter/regulator assembly within 3 ft. (914 mm) horizontally from the centerline of the regulator.
I. Gas Service regulator vent outlet - 3 ft. (914 mm).
J. Non-mechanical air supply inlet to building or the combustion air inlet to any other appliance. CANADA: 12” (305 mm). US: 9” (229 mm).
K. Mechanical air supply inlet. CANADA: 6 ft. (1.83 m) US: 3 ft. (914 mm) above if within 10 ft. (3.05 m) horizontally. Massachusetts installations: 10 ft. (3.05 m).
L. Above paved side-walk or paved driveway located on public property - 7 ft. (2.13 m).

M. Under veranda, porch, deck, or balcony (must be fully opened on a min. of 2 sides) - 12” (305 mm).
N. Between two horizontal terminations - 12” (305 mm).
O. Between two vertical terminations - 12” (305 mm). Terminations may be the same height.
P. Above furnace exhaust or inlet - 12” (305 mm).

*Clearance must be in accordance with local installation codes & the requirements of the gas supplier.

---

**CAUTION:** This appliance must not be connected to or joined with any chimney flue serving any other appliance.

---

**VENTING** *(Vertical Cap Requirements)*

---

**H (minimum) - MINIMUM HEIGHT FROM ROOF TO LOWEST DISCHARGE OPENING**

* IF VENT IS CLOSER THAN 8’ (2.44 m), IT MUST TERMINATE AT LEAST 2’ (0.61 m) HIGHER THAN ANY PORTION OF A BUILDING WITHIN 10’ (3.05 m) OF THE VENT.
ATTENTION: If converting to LP (propane) gas, do so now before installing log set. Follow instructions included with conversion kit.

NOTE: Log numbers are located on the bottom of each log. Refer to following instructions and illustrations for proper placement.

CAUTION: Do not place logs directly over burner port holes. Improper log placement may affect flame appearance and cause excessive soot to build up on logs and glass.

**STEP 1**

Position base log #1 over pilot shield on burner. Pull log forward until it reaches the backside of burner ports.

**DO NOT ALLOW LOG TO COVER THE BURNER PORT HOLES.**

**STEP 2**

Position base logs #2 & #3 onto burner as shown above. **DO NOT ALLOW LOGS TO COVER THE BURNER PORT HOLES.**
Position two base logs #6 and #4 log onto burner as shown above. DO NOT ALLOW LOGS TO COVER THE BURNER PORT HOLES.

Position logs #8 & #9 onto base logs and log grate. The #8 log is placed over burner jumper tube.
Install logs #5 - #7 as shown.

Use a steel or stiff bristle nylon brush to distribute Rock Wool Embers onto logs and burner.

Randomly place ‘Klinkers’ in this area. Do not place ‘Klinkers’ directly on burner ports.
1. **Models PRC-36 & PRC-36-RF**: Turn gas control knob to the ‘OFF’ position.

2. Shut off gas supply at the manual shut-off valve.

3. Disconnect gas line flex tube from the manual shut-off valve.

4. **Model PRC-36**: Disconnect any wall switch, remote control or thermostat wires from top & bottom terminals on the gas valve.
   **Model PRC-36-RF**: Unplug fan cord from receptacle, disconnect the (2) wires from fan cord. (The wires will remain connected to the back of gas valve).

5. Remove upper hood, upper louver.

6. Remove glass assembly.

7. Remove logs, pilot shield and ember log refractory.

8. Remove pilot shield.

9. Remove screws securing front left and back right log grate legs. Remove burner/log grate assembly from firebox by lifting front of burner assembly up out of flange while pushing pilot assembly back slightly.

11. Remove adjustable venturi mounting spacers.

12. Remove (8) screws securing millivolt board. Lift board up and out of firebox.

---

**CAUTION**: If the burner and/or pilot have been burning, use the appropriate protection to avoid burns or damage to personal property before removing any components.
1. Place millivolt board in firebox, aligning the holes in the millivolt board with holes in the firebox bottom. 
   MAKE SURE SEALING GASKET IS IN PLACE ON FIREBOX BOTTOM! Secure millivolt board to firebox bottom with the (8) screws previously removed.
2. Place venturi spacers onto venturi mounting studs.
3. Re-install front burner assembly, making sure burner tube is positioned over burner orifice. Secure with screws.
4. Reinstall back burner/log grate assembly by positioning burner tube into venturi collar on millivolt board and pilot assembly through rectangular opening. Secure front left and back right legs with screws.
5. Reinstall pilot shield.
6. Reinstall ember refractory.
7. Reinstall log set. (Pages 31-33).
8. Reconnect gas line to manual shut-off valve.
9. **Model PRC-36:** Reconnect any wall switch, remote control or thermostat wires to the top & bottom terminals on the gas valve. 
   **Model PRC-36-RF:** Re-connect the (2) wires to fan cord. Plug fan cord into receptacle.
12. Turn gas on.
13. Verify proper log placement, operation of fireplace, and any electrical components.

**CAUTION:** CHECK ALL CONNECTIONS FOR LEAKS, WHETHER FIELD OR FACTORY MADE.
**INSTALLATION**

A. Align hooks in upper louver to slots located in the fireplace face. Set down into position.

B. Insert upper hood flange into clips located at the top of upper air passage.

C. Partially thread (2) screws (included in components packet) into nuts at each end of lower grill. Secure to fireplace by threading screws into corresponding holes in the inside flange of lower grill opening. The lower grill can now be opened and closed to access the gas valve and controls.

**REMOVAL**

A. Use both hands to pull hood out of upper air passage clips.

B. Lift upper louver up and out of slots.

C. Remove screws securing lower grill at each end to remove from fireplace.
DUE TO HIGH SURFACE TEMPERATURES, KEEP CHILDREN, CLOTHING AND FURNITURE AWAY.

This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.

1. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

2. BEFORE LIGHTING, smell all around the appliance for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

3. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in, or turn by hand, do not try to repair it, call a qualified service technician. Forced or attempted repair may result in a fire or explosion, and loss of warranty.

4. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system which has been under water.

DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.

WHAT TO DO IF YOU SMELL GAS:
* Do not touch any electrical switches
* Do not try to light any appliance
* Do not use the phone in your building
* Immediately call your gas supplier from a neighbor’s phone
* Follow the gas supplier’s instructions
* If you cannot reach your gas supplier, call the fire department

WARNING: CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE. CLOTHING OR OTHER FLAMMABLE MATERIAL MUST NOT BE PLACED ON OR NEAR THE APPLIANCE.

NOTE: A PAINT SMELL WILL OCCUR DURING THE FIRST FEW HOURS OF BURNING. IT IS RECOMMENDED TO LEAVE THE FAN OFF DURING THIS PERIOD TO HELP SPEED THE PAINT CURING PROCESS.

NOTE: THIS FIREPLACE MAY PRODUCE NOISES OF VARYING DEGREE AS IT HEATS AND COOLS DUE TO METAL EXPANSION AND CONTRACTION. THIS IS NORMAL AND DOES NOT AFFECT THE PERFORMANCE OR LONGEVITY OF THE FIREPLACE.
1. Set thermostat to the lowest setting, if installed.
2. Turn off all electrical power to the appliance.
3. Open lower grill to access the gas valve & controls.

A. Push gas control knob in slightly and turn clockwise to “OFF”. Wait five (5) minutes to allow any gas that may have accumulated inside the firebox to escape. If you then smell gas, STOP! Follow the safety information on the front cover and on the previous page of this installation manual. If you don’t smell gas, go to the next step.

NOTE: Gas control knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.

B. Locate pilot - follow metal tube from gas control. The pilot is located inside the combustion chamber.

C. Push gas control knob on the gas valve in slightly and turn counterclockwise to ‘PILOT’. Push valve knob in and hold while repeatedly pressing the piezo igniter button until the pilot is lit while continuing to hold in the gas control knob.

D. Hold gas control knob in for one (1) minute after pilot is lit. Release the gas control knob. If the pilot goes out, repeat steps C-D. When the pilot is lit, proceed to step E.

CAUTION: If knob does not pop out when released, stop and immediately call your service technician or the gas supplier. If the pilot will not stay lit after several tries, turn the gas control knob to OFF and call your service technician or the gas supplier.

E. Push gas control knob in slightly and turn counterclockwise to ‘ON’. The burner can now be turned ‘ON’ by depressing the ON/OFF rocker switch located beside the valve, or wall switch, OR by setting the thermostat or remote control to the desired setting.

F. Turn on all electric power to the appliance (if applicable).

NOTE: When the fireplace is initially lit, condensation will appear on the glass; this is normal in all gas fireplaces and will disappear after several minutes.
**TURN BURNER OFF**

G. To turn the burner ‘OFF’, depress the ON/OFF rocker switch to ‘OFF’, flip ‘off’ wall switch or adjust setting on the thermostat or remote control.

NOTE: The pilot will stay lit.

**TURN PILOT OFF**

H. Turn the pilot off by pushing in and turning the gas control knob to the ‘OFF’ position. **DO NOT FORCE.**

NOTE: This control valve has an interlock device. If pilot has been turned off, it cannot be relit until the thermocouple has cooled, (approximately 60 seconds).

**ADJUSTING FLAME HEIGHT**

The gas control valve has a HI /LO flame adjustment knob designed to allow you to tailor the look and heat output of your fireplace. Adjust by turning the middle knob on the gas control valve.
IMPORTANT NOTICE: Pressure check taps for the manifold (outgoing) and inlet (incoming) pressure have been incorporated into the valve. The pressure tap marked ‘OUT’ measures outgoing pressure and the pressure tap marked ‘IN’ measures incoming pressure. Follow instructions below for proper testing procedures.

NOTE: The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at pressures in excess of ½ psi.

NOTE: The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas line at test pressures equal to or less than ½ psi (3.5 kPa).

**INLET PRESSURE TEST:**

1. Loosen inlet (‘IN’) pressure tap screw (counter-clockwise).
2. Attach manometer using a 5/16” I.D. hose.
3. Light pilot.
4. Turn gas control knob to ‘ON’ (burner should not light). Note manometer reading.
5. Press rocker switch to ‘ON’. Check pressure to ensure that it stays near the maximum inlet pressure.
6. Press rocker switch to ‘OFF’.
7. Turn gas control knob to ‘OFF’.
8. Disconnect hose and tighten screw (clockwise). Screw should be snug, do not over tighten.
9. Relight pilot and turn gas control knob to ‘ON’. Reattach manometer to inlet pressure tap to verify that it is completely sealed. Manometer should read no pressure.

**MANIFOLD PRESSURE TEST:**

1. Light pilot.
2. Loosen manifold (‘OUT’) pressure tap screw (counter-clockwise).
3. Attach manometer to pressure tap using a 5/16” I.D. hose.
4. Turn gas control knob to ‘ON’.
5. Press rocker switch to ‘ON’ and note manometer reading.
6. Press rocker switch to ‘OFF’.
7. Disconnect manometer hose and tighten screw (clockwise). Screw should be snug, do not over tighten.
8. Attach manometer to manifold pressure tap to verify that it is completely sealed. Manometer should read no pressure when the rocker switch is pressed to ‘ON’.

**CAUTION:** A LOW PRESSURE READING CAN CAUSE DELAYED IGNITION.

NOTE: If inlet pressure reading is too high or too low, contact the gas company. Only a qualified gas service technician should adjust the incoming gas pressure.
FOR YOUR SAFETY - READ BEFORE LIGHTING

WARNING: IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT, CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

DUE TO HIGH SURFACE TEMPERATURES, KEEP CHILDREN, CLOTHING AND FURNITURE AWAY.

This appliance needs fresh air for safe operation and must be installed so there are provisions for adequate combustion and ventilation air.

1. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

2. BEFORE LIGHTING, smell all around the appliance for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

3. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in, or turn by hand, do not try to repair it, call a qualified service technician. Forced or attempted repair may result in a fire or explosion, and loss of warranty.

4. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system which has been under water.

WHAT TO DO IF YOU SMELL GAS:
* Do not touch any electrical switches
* Do not try to light any appliance
* Do not use the phone in your building
* Immediately call your gas supplier from a neighbor’s phone
* Follow the gas supplier’s instructions
* If you cannot reach your gas supplier, call the fire department

WARNING: CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THE APPLIANCE. CLOTHING OR OTHER FLAMMABLE MATERIAL MUST NOT BE PLACED ON OR NEAR THE APPLIANCE.

NOTE: A PAINT SMELL WILL OCCUR DURING THE FIRST FEW HOURS OF BURNING. IT IS RECOMMENDED TO LEAVE THE FAN OFF DURING THIS PERIOD TO HELP SPEED THE PAINT CURING PROCESS.

NOTE: THIS FIREPLACE MAY PRODUCE NOISES OF VARYING DEGREE AS IT HEATS AND COOLS DUE TO METAL EXPANSION AND CONTRACTION. THIS IS NORMAL AND DOES NOT AFFECT THE PERFORMANCE OR LONGEVITY OF THE FIREPLACE.
1. Turn off all electrical power to the appliance.

2. Open lower grill to access the gas valve & controls.

A. Push control knob in slightly and turn clockwise to the **OFF** position. Wait five (5) minutes to clear out any gas. If you then smell gas, **STOP!** Follow the safety information on the previous page and on the front cover of this installation manual. If you don’t smell gas, go to the next step.

B. Locate pilot. The pilot is located inside the combustion chamber.

C. Push the control knob on the gas valve in slightly and turn counterclockwise to **PILOT**. Push the control knob all the way in and hold. Push the plunger on the piezo ignitor until the pilot is lit. The pilot will generally light within two or three pushes on the piezo ignitor. Hold the knob for about one (1) minute after the pilot is lit. Release knob and it will pop back out. Pilot should remain lit. If it goes out, repeat steps A-C.

D. Push the control knob on the gas valve in slightly and turn counterclockwise to the **ON** position.

**NOTE:** Gas control knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.

**NOTE:** If the manual switch is in the LOCAL position, the main burner will turn on immediately.

**NOTE:** When the fireplace is initially lit, condensation will appear on the glass; this is normal in all gas fireplaces and will disappear after several minutes.

**CAUTION:** If knob does not pop out when released, stop and immediately call your service technician or the gas supplier. If the pilot will not stay lit after several tries, turn the gas control knob to OFF and call your service technician or the gas supplier.
IMPORTANT: On the initial use of the transmitter, a recognition operation is required between the receiver / valve and the transmitter.

1. Turn gas control knob to the PILOT position. Move LOCAL / REMOTE switch to the LOCAL position for at least two (2) seconds, then move switch to the REMOTE position.

2. Press FAN or FLAME button on the transmitter within thirty (30) seconds of the switch change.

3. Turn gas control knob to the ON position.

The LED will blink, indicating that the transmitter will now work with the receiver / valve. If the switch stays in the REMOTE position, the TR8220A Transmitter will control the main valve, flame modulation level and fan control.

If the LOCAL / REMOTE switch is in the LOCAL position, the receiver / valve will be at the highest setting.

TURN THE BURNER OFF

LOCAL SETTING: Turn control knob clockwise to the PILOT position.

REMOTE SETTING: The TR8220A transmitter can shut off the main burner and fan. However, the control is still ‘ON’ and a command from the transmitter can turn on the main burner and fan.

TURN THE SYSTEM OFF

1. Open lower grill to access the gas valve & controls.
2. Turn gas control knob clockwise to the OFF position. This closes the main gas and safety valves. The transmitter cannot turn on the main burner or the fan.

NOTE: If the manual switch is in the LOCAL position, the main burner will turn on immediately.

NOTE: This control valve has an interlock device. If pilot has been turned off, it cannot be relit until the thermocouple has cooled, (approximately 60 seconds).
NOTE: The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure testing of that system at pressures in excess of ½ psi.

NOTE: The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure testing of the gas line at test pressures equal to or less than ½ psi (3.5 kPa).

**INLET PRESSURE TEST:**

1. Loosen inlet (‘IN’) pressure tap screw (counter-clockwise).
2. Attach manometer using a 1/4” I.D. hose.
3. Light pilot.
4. Turn gas control knob to ‘ON’. Note manometer reading.
5. Turn gas control knob to ‘OFF’.
6. Disconnect hose and tighten screw (clockwise). Screw should be snug, do not over tighten.
9. Relight pilot and turn gas control knob to ‘ON’. Reattach manometer to inlet pressure tap to verify that it is completely sealed.

**MANIFOLD PRESSURE TEST:**

1. Light pilot.
2. Loosen manifold (‘OUT’) pressure tap screw (counter-clockwise).
3. Attach manometer to pressure tap using a 1/4” I.D. hose.
4. Turn gas control knob to ‘ON’. Note manometer reading.
5. Disconnect manometer hose and tighten screw (clockwise). Screw should be snug, do not over tighten.
6. Attach manometer to manifold pressure tap to verify that it is completely sealed. Manometer should read no pressure.
IMPORTANT: PLEASE REVIEW AND RETAIN THE INSTRUCTIONS INCLUDED WITH THE RF TRANSMITTER. IT PROVIDES ADDITIONAL INFORMATION AND DETAILS CONCERNING THE OPERATIONAL PROCEDURES AND FUNCTIONS FOR THE RF REMOTE CONTROL.

FUNCTIONS:
- Flame powered system.
- Flame powered flame modulation.
- Electronics integrated into valve to provide thermostat, flame, and fan functions with RF commands.
- Temperature compensated RF receiver.
- Main burner runs on ‘HIGH’ when manual switch is set to ‘LOCAL’.

TRANSMITTER SIGNAL:
- When transmitter is in Auto mode, a signal is sent every 10 minutes if there is a change in room temperature.
- When transmitter is in ‘ON’ or ‘OFF’ modes, a signal is sent every 10 minutes with the ‘ON’ or ‘OFF’ status condition.
- Make sure antennae is not touching metal.

RECEIVER SHUTDOWN OF BURNER:
- In the remote ‘AUTO’ mode, the valve shuts off if it does not receive a signal within 3 hours from the transmitter.
- In the ‘LOCAL’ mode, the valve does not shut off.
- In the remote ‘MANUAL’ mode, the valve shuts off if it does not receive a signal within 6 hours from the transmitter.

THERMOPILES:
- The negative leads (white) must be connected to the terminals marked with white dots.

LED TROUBLESHOOTING:
- In normal operation, LED blinks once every two seconds; also, LED will be on for one second after every valid command received by the RV83110D; these are not error codes.
- Failure codes (see table) can occur anytime after the pilot burner is lit. Failure code timing is 1/4 second on, 1/2 second off.
- Sequence is failure code followed by LED not blinking for four seconds.
- In the event of multiple failure codes, the next failure code follows the previous code failure by approximately three seconds.

<td>Chose REMOTE or LOCAL operation.</td>
<td>Move LOCAL/REMOTE switch to LOCAL or leave in REMOTE.</td>
</tr>
</tbody>
</table>

OPERATION IN THE REMOTE POSITION:

AUTO Mode
With the control in the AUTO mode, the flame in the main burner will turn on, off, or change height based on the heat needed to maintain the set temperature.

<table>
<thead>
<tr>
<th>STATUS</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set to AUTO.</td>
<td>Press MODE button until mode is AUTO.</td>
</tr>
<tr>
<td>Change set temperature.</td>
<td>Press UP or DOWN key to change temperature.</td>
</tr>
<tr>
<td>Flame.</td>
<td>Automatically changes.</td>
</tr>
<tr>
<td>Fan.</td>
<td>Automatically changes.</td>
</tr>
<tr>
<td>To set Delay Timer.</td>
<td>Press TIME key followed by either UP or DOWN arrow key.</td>
</tr>
</tbody>
</table>

CAUTION: PROPERTY DAMAGE HAZARD. Excessive heat can cause property damage. In AUTO Mode, the main burner will cycle indefinitely to maintain the set temperature. Keep the transmitter in a heated living space to make sure the main burner is not on continuously.

ON Mode
With the control in the ON mode, the flame and fan levels and the delay timer are changed with the UP and DOWN arrow keys.

<table>
<thead>
<tr>
<th>STATUS</th>
<th>ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set to ON.</td>
<td>Press MODE button until mode is ON.</td>
</tr>
<tr>
<td>Flame.</td>
<td>Press FLAME button and press UP or DOWN arrow keys to change flame height.</td>
</tr>
<tr>
<td>Fan.</td>
<td>Press FAN button and press UP or DOWN arrow keys to change fan speed.</td>
</tr>
<tr>
<td>Delay Time.</td>
<td>Press DELAY TIMER button and press UP or DOWN key to change timer.</td>
</tr>
</tbody>
</table>

OFF Mode
The flame in the main burner will turn off and the room temperature will be displayed in the remote window.

Press MODE until mode is OFF.

Operation in the LOCAL Mode. NOTE: Remote/Local switch on the receiver/valve must be in the LOCAL position.

FAN
Flame height and fan speed both go to the highest position.

In LOCAL mode, to turn fan ON/OFF, rotate manual knob from ON to PILOT position.

FINALIZING THE INSTALLATION

FLAME APPEARANCE:

Flame appearance is affected by several factors including altitude, venting configuration and fuel quality. Although the venturi setting has been factory set, adjustments may be necessary for optimal performance and visual aesthetics.

When fireplace is first lit, the flames will be blue. The flames will gradually turn yellowish-orange during the first 15 minutes of operation. If the flames remain blue or the flames become dark orange with evidence of sooting (black tips), the burner tube venturi may need to be adjusted.

WARNING: BURNER TUBE ADJUSTABLE VENTURI POSITIONING SHOULD ONLY BE PERFORMED BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN.

<table>
<thead>
<tr>
<th>FACTORY SET BURNER TUBE VENTURI SETTINGS (ADJUST AS NECESSARY FOR YOUR INSTALLATION)</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NATURAL GAS</strong></td>
</tr>
<tr>
<td>FRONT BURNER</td>
</tr>
<tr>
<td>BACK BURNER</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>BURNER TUBE VENTURI ADJUSTMENT GUIDELINES</th>
</tr>
</thead>
<tbody>
<tr>
<td>VENTURI POSITION</td>
</tr>
<tr>
<td>-------------------</td>
</tr>
<tr>
<td>Closed too far</td>
</tr>
<tr>
<td>Open too far</td>
</tr>
</tbody>
</table>

NOTE: IF SOOT IS PRESENT, CHECK LOG POSITIONING BEFORE ADJUSTING BURNER VENTURI. LOGS MUST NOT BLOCK BURNER PORTS.

IMPORTANT: SLIGHT ADJUSTMENTS TO THE BURNER VENTURI OPENING CREATE DRAMATIC RESULTS. ADJUST AT SLIGHT INCREMENTS UNTIL DESIRED LOOK IS ACHIEVED. ALWAYS BURN FIREPLACE FOR AT LEAST 15 MINUTES AND ALLOW TIME TO COOL BEFORE MAKING ANY FURTHER ADJUSTMENTS.

TO ADJUST BACK BURNER VENTURI:

WARNING: TO AVOID PROPERTY DAMAGE OR PERSONAL INJURY, ALLOW FIREPLACE AMPLE TIME TO COOL BEFORE MAKING ANY ADJUSTMENTS.

1. Remove set screw securing venturi wheel (located under firebox).
2. Moving handle towards #1 position closes venturi opening. Moving handle towards #9 position opens venturi opening.
4. Light fireplace and wait 15 minutes before determining if any further adjustments are needed.

TO ADJUST FRONT BURNER VENTURI:

1. Follow Millivolt Board Removal instructions on page 34 to access and remove front burner assembly.
2. Loosen screw on venturi and adjust as necessary. Tighten screw.
3. Follow Millivolt Board Installation instructions on page 35 to reinstall all components.
FINALIZING THE INSTALLATION

RESTRICTOR USAGE:

Turn the fireplace on and allow to burn for 15 minutes. If flames indicate there is excessive draft (flickering, short flames) or insufficient draft (lifting or ghosting flames) a restrictor may be necessary, or the previously installed restrictor may need to be modified or removed.

WARNING: TO AVOID PROPERTY DAMAGE OR PERSONAL INJURY, ALLOW FIREPLACE AMPLE TIME TO COOL BEFORE MAKING ANY ADJUSTMENTS AND / OR INSTALLATIONS.

<table>
<thead>
<tr>
<th>FLAME APPEARANCE</th>
<th>DRAFT PROBLEM</th>
<th>RESTRICTOR SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short, flickering</td>
<td>Excessive draft - not enough restriction</td>
<td>Add restrictor</td>
</tr>
<tr>
<td>Lifting or ghosting*</td>
<td>Insufficient draft - too much restriction</td>
<td>Remove inner ring(s) on restrictor or remove restrictor</td>
</tr>
</tbody>
</table>

* Improper venting installation may cause flames to lift or “ghost” - a dangerous situation. Inspect flames after installation to ensure proper performance. If it is determined that the venting is correct and the restrictor has been removed, yet the flames are still lifting or ghosting, shut off gas supply to fireplace and call a qualified service technician.

RESTRICTOR INSTALLATION / MODIFICATION (after termination completion):

If it is determined that a restrictor is needed or restrictor modification is required after the termination is installed, access can be reached through the fireplace baffle. Please remove logs, upper refractory clip and refractory to avoid damaging these components.

1. Remove the (4) screws securing baffle. Remove baffle to expose venting.

2. Depending on your specific needs, determined by the chart above along with other factors, make necessary modifications.

3. If installation of a restrictor (included in fireplace components packet) is necessary, bend tabs on restrictor to approx. 80 degree angles to create tension when inserted into the exhaust pipe on fireplace. Insert restrictor into 5” exhaust pipe with tabs pointing towards you.

4. If modification is necessary, remove restrictor by pulling it down and out of 5” exhaust pipe.

5. Reinstall baffle by resting baffle front above flange along inside top of firebox opening. Tip baffle back against rear firebox wall. Secure with the (4) screws previously removed.

6. Reinstall refractory panels and log set.

7. Attach glass frame assembly and light fireplace. Wait 15 minutes before determining if any further modifications are necessary.

Bend tabs to approx. 80 degree angles to create tension to hold itself in place when installed.

Remove tab (s) to create small restrictor

Slide restrictor into exhaust pipe at top of fireplace with tabs pointing towards you.
This fireplace has been designed to operate with the damper fully open or completely closed depending on heat output desired without compromising flame appearance.

The damper is located at the inside top of the firebox and can be viewed through the glass. The damper control is located under the firebox.

To reduce the amount of heat entering the room, raise the damper control up and push into mounting slot. The damper is now in the fully open position and allows more heat to exit through the vent system.

If more heat is desired, pull handle out and down. The damper is now closed.
The appliance is required to be inspected at least once a year by a professional service person.

The compartment below the firebox (behind the lower grill) must be cleaned at least once a year, more frequent cleaning may be required due to excessive lint from carpeting, bedding materials, or other fibrous materials. It is imperative that the burner be cleaned once a year.

Annual cleaning of the burner system is required.

The burner assembly may be removed for easier access. Refer to pages 34-35 in this installation manual for complete instruction on removing & reinstalling the burner assembly.

Visually check for blocked port holes, especially near the pilot. Blocked port holes may cause delayed ignition.

Reinstall the burner assembly following instructions on page 35 of this installation manual.

Visually check pilot light and burner when in operation. The flames should be steady, not lifting or floating.

NOTE: INSTALLATION AND REPAIR SHOULD BE DONE ONLY BY QUALIFIED SERVICE PERSON. THE APPLIANCE SHOULD BE INSPECTED BEFORE USE AND ANNUNCIALLY BY A QUALIFIED SERVICE PERSON. MORE FREQUENT CLEANING MAY BE REQUIRED DUE TO EXCESSIVE LINT FROM CARPETING, BEDDING MATERIALS, ETC. IT IS IMPERATIVE THAT CONTROL COMPARTMENTS, BURNERS AND CIRCULATION AIR PASSAGEWAYS OF THE APPLIANCE BE KEPT CLEAN.

The fan should be disconnected from electrical current, and cleaned (vacuumed) every six months. The bearings are sealed and require no oiling.

The flow of combustion and ventilation air must not be obstructed.

Clean glass only when cool and only with non-abrasive cleansers.

Do not operate this fireplace with the glass/frame assembly removed, cracked or broken.

The glass assembly, part #PRC-057T, shall only be replaced as a complete unit, as supplied by Hussong Mfg. Co., Inc.

Replacement of the glass & frame assembly, part #PRC-057T, must only be performed by a licensed or qualified service person.

Do not strike or slam glass door assembly.

**MILLIVOLT BOARD SYSTEM**

**VENT SYSTEM**

Annual examination of the venting system by a qualified agency is required.

IF THE VENT-AIR INTAKE SYSTEM IS DISASSEMBLED FOR ANY REASON, RE-INSTALL PER THE INSTRUCTIONS PROVIDED WITH THE INITIAL INSTALLATION.

The flow of combustion and ventilation air must not be obstructed.

Keep the appliance area clear of combustible materials, such as gasoline and other flammable vapors and liquids.

**GLASS CLEANING & REPLACEMENT**

**Important:** Any safety screen or guard removed for servicing must be replaced prior to operating the appliance.

Caution: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing.

Caution: Keep the appliance area clear of combustible materials, such as gasoline and other flammable vapors and liquids.

**FAN**

**PAGE 52**
TROUBLESHOOTING (PRC-36 only)

NO SPARK FROM ELECTRODE TO PILOT WHEN PIEZO BUTTON IS TRIGGERED.
A. Check wiring at back of piezo for proper connection.
B. Check wiring at electrode for proper connection.
C. Check position of electrode (1/8” (3 mm) between electrode and pilot). Readjust if necessary.
D. Look for arc below electrode and along electrode wire. Direct metal contact may cause an arc below electrode.

SPARK IGNITOR WILL NOT LIGHT AFTER REPEATED TRIGGERING OF PIEZO BUTTON.
A. No gas or low gas pressure.
   ♦ Check remote shut off valves from fireplace. Usually there is a valve near the main. There may be more than (1) valve between the fireplace and the main.
   ♦ Low gas pressure can be caused by several situations such as a bent line, too narrow diameter pipe, or low line pressure. Consult with plumber or gas supplier.
B. No LP in tank.
   ♦ Check LP (propane) tank. Refill if necessary.

PILOT WILL NOT STAY LIT AFTER CAREFULLY FOLLOWING LIGHTING INSTRUCTIONS.
A. Check that pilot flame impinges on thermocouple. Clean and / or adjust pilot for maximum flame impingement.
B. Ensure the thermocouple connection at gas valve is fully inserted and tight (hand tight plus 1/4 turn).
C. Thermocouple reading below 15 millivolts.
   ♦ Disconnect thermocouple from valve, place one millivolt meter lead wire on the end of the thermocouple and the other millivolt meter lead wire on the thermocouple’s copper wire. Start pilot while holding valve knob in. If the millivolt reading is less than 15 millivolts, replace the thermocouple.
D. Thermopile not generating sufficient millivolts.
   ♦ Pilot flame must be enveloping thermopile. Adjust pilot flame if necessary.
   ♦ Check thermopile wire connections at valve. Tighten if necessary.
   ♦ Check thermopile with millivolt meter. Turn remote / thermostat / wall switch or ON/OFF switch to OFF. Turn valve knob to PILOT position (pilot should remain lit). Take reading at THTP & TP terminals on gas valve. Reading should be 350 millivolts minimum. Replace thermopile if reading falls below specified minimum.
TROUBLESHOOTING (PRC-36 only)

**BURNER WILL NOT LIGHT**

A. Gas control knob not turned to ‘ON’.

B. ‘ON’/‘OFF’ switch not turned on.

C. Remote, wall switch or thermostat not turned ‘ON’.

D. Plugged main burner orifice.

E. Remote, wall switch, thermostat or ‘ON/ OFF’ switch wires defective.
   ♦ Check wires for proper connections. Place jumper wires across terminal at switch. If burner lights, replace defective switch.
   ♦ If switch checks ok, place jumper wires across switch wires on gas valve. If burner lights, wires are faulty or connections are bad.

**FREQUENT PILOT OUTAGES**

A. Pilot shield not installed.

B. Pilot flame too high or too low, causing pilot safety to drop out.
   ♦ Clean and adjust flame for maximum flame impingement on thermopile.

**BURNER WON’T STAY LIT**

A. Thermopile wires loose at valve terminals.
   ♦ Tighten if necessary.

B. Thermopile wires ground out due to pinched wires.
   ♦ Free pinched wires if necessary.

C. Refractory panel placement.
   ♦ Refractory panels must be tight against firebox walls. It may be necessary to secure panels with high-temp sealant, especially around the intake duct.
PILOT AND BURNER EXTINGUISH WHILE IN OPERATION

A. No LP (propane) in tank.
   ♦ Check tank and refill if necessary.

B. Glass frame assembly not installed correctly.
   ♦ Refer to page 15 in this manual for proper glass frame assembly installation instructions.

C. Defective thermopile or thermocouple.
   ♦ Check thermopile and thermocouple for proper millivolts.

D. Improper pitch on horizontal vent.
   ♦ 1/4” (6 mm) rise per foot is required on horizontal venting.

E. Inner vent pipe leaking exhaust gases back into firebox.
   ♦ Check for leaks. Repair if necessary.

F. Improper vent cap installation.
   ♦ Check for proper vent cap installation. Maximum downward slope of horizontal vent cap is 1/4” (6 mm). Adjust if necessary.
   ♦ Check vent cap for blockage. Remove debris if necessary.

G. Excessive draft.

GLASS SOOTING

A. Improper log placement.
   ♦ Refer to log placement instructions on pages 31-33 of this installation manual.

B. Improper venturi setting.
   ♦ Venturi may need to be opened slightly to allow more air into the gas mix.

C. Improper pitch on horizontal venting.
   ♦ 1/4” (6 mm) rise per foot is required on horizontal venting.

FLAME BURNS BLUE AND LIFTS OFF BURNER

A. Improper Venturi setting.
   ♦ Venturi may need to be closed slightly.

B. Improper vent cap installation.
   ♦ Check for proper vent cap installation.

C. Blockage or vent system leaks.
If the manual switch is set to REMOTE, press the Mode button to display AUTO on the transmitter. Does the transmitter display the room and temperature setting?

Yes → Move switch from LOCAL to REMOTE. Press any key within 30 seconds.

No → If the setting is above room temperature on the transmitter, does the main valve and fan turn on?

Yes → Turn pilotstat knob to OFF to turn valve completely off.

No → If the setting is below room temperature on the transmitter, does the main valve and fan turn off?

Yes → Set manual switch to LOCAL or REMOTE

Yes → Light pilot burner.

No → Did the LED stop blinking?

Yes → Release pilotstat knob.

Yes → Cycle switch once and leave in remote. Press any key on transmitter for recognition operation.

Yes → Review LED failure analysis.

No → Choose LOCAL or REMOTE path. Set switch to LOCAL or REMOTE.

REMOTE PATH

If the manual switch is set to REMOTE, set the Mode button to display “ON”. Does the transmitter control the main burner and fan?

Yes → Does transmitter change levels of flame height, fan speed and set temperature?

Yes → Set levels of flame height and fan to “0” to shut off main burner and fan.

No → Turn pilotstat knob to OFF to turn valve completely off.

No → Move switch from MANUAL to REMOTE. Press any key on transmitter.

LOCAL PATH

If the manual switch is set to LOCAL, did the main burner light?

Yes → Does the transmitter control fan?

Yes → Turn pilotstat knob to PILOT to turn off main burner.

No → Move switch from LOCAL to REMOTE. Press any key on transmitter. Move switch back to LOCAL.

Yes → Turn pilotstat knob to OFF to turn valve completely off.
TROUBLESHOOTING (PRC-36-RF only)

CAUTION: THE FOLLOWING MUST BE PERFORMED BY A QUALIFIED TECHNICIAN

NO SPARK FROM ELECTRODE TO PILOT WHEN PIEZO BUTTON IS TRIGGERED.
A. Check piezo wiring for proper connection.
B. Check position of electrode (1/8” (3 mm) between electrode and pilot). Readjust if necessary.
C. Look for arc below electrode and along electrode wire. Direct metal contact may cause an arc below electrode.

SPARK IGNITOR WILL NOT LIGHT AFTER REPEATED TRIGGERING OF PIEZO BUTTON.
A. No gas or low gas pressure.
   ♦ Check remote shut off valves from fireplace. Usually there is a valve near the main. There may be more than (1) valve between the fireplace and the main.
   ♦ Low gas pressure can be caused by several situations such as a bent line, too narrow diameter pipe, or low line pressure. Consult with plumber or gas supplier.
B. No LP in tank.
   ♦ Check LP (propane) tank. Refill if necessary.

PILOT WILL NOT STAY LIT AFTER CAREFULLY FOLLOWING LIGHTING INSTRUCTIONS.
A. Check that pilot flame impinges on thermopiles. Clean and / or adjust pilot for maximum flame impingement.
B. Ensure the thermopile connections at gas valve are properly connected. The negative leads (white) must be connected to the terminals with the one white dot next to them.

BURNER WILL NOT LIGHT
A. Gas control knob not turned to ‘ON’.
B. Plugged main burner orifice.

FREQUENT PILOT OUTAGES
A. Pilot shield not installed.
B. Pilot flame too high or too low, causing pilot safety to drop out.
   ♦ Clean and adjust flame for maximum flame impingement on thermopiles.

FLAME BURNS BLUE AND LIFTS OFF BURNER
A. Improper Venturi setting.
   ♦ Venturi may need to be closed slightly.
B. Improper vent cap installation.
   ♦ Check for proper vent cap installation.
C. Blockage or vent system leaks.
TROUBLESHOOTING (PRC-36-RF only)

**BURNER WON’T STAY LIT**

A. Thermopile wires loose at valve terminals.
   ♦ Adjust if necessary.

B. Thermopile wires ground out due to pinched wires.
   ♦ Free pinched wires if necessary.

C. Refractory panel placement.
   ♦ Refractory panels must be tight against firebox walls. It may be necessary to secure panels with high-temp sealant, especially around the intake duct.

**PILOT AND BURNER EXTINGUISH WHILE IN OPERATION**

A. No LP (propane) in tank.
   ♦ Check tank and refill if necessary.

B. Glass frame assembly not installed correctly.
   ♦ Refer to page15 in this manual for proper glass frame assembly installment instructions.

C. Improper pitch on horizontal vent.
   ♦ 1/4” (6 mm) rise per foot is required on horizontal venting.

D. Inner vent pipe leaking exhaust gases back into firebox.
   ♦ Check for leaks. Repair if necessary.

E. Improper vent cap installation.
   ♦ Check for proper vent cap installation. Maximum downward slope of horizontal vent cap is 1/4” (6 mm). Adjust if necessary.
   ♦ Check vent cap for blockage. Remove debris if necessary.

F. Excessive draft.

**GLASS SOOTING**

A. Improper log placement.
   ♦ Refer to log placement instructions on pages 31-33 of this installation manual.

B. Improper venturi setting.
   ♦ Venturi may need to be opened slightly to allow more air into the gas mix.

C. Improper pitch on horizontal venting.
   ♦ 1/4” (6 mm) rise per foot is required on horizontal venting.

KOZY HEAT
LIMITED 10 YEAR WARRANTY

Effective July 01, 2003

This Limited 10 Year Warranty will not become effective until the warranty registration form has been completed and mailed to Hussong Manufacturing Co., Inc., P.O. Box 577, Lakefield, MN 56150. This registration form must be received within 30 days of installation. Failure to do so may result in delayed warranty coverage and submission of proof of purchase will be required.

Hussong Manufacturing Co., Inc. warranties to the original purchaser of this Kozy Heat Fireplace, that it is free of defects in materials and workmanship at the time of manufacture.

Subject to the following conditions & requirements, Hussong Manufacturing Co., Inc. extends the following limited warranty under normal use and service, with respect to the Kozy Heat line of gas burning fireplaces.

LIMITATION OF LIABILITY

To make a claim under this warranty, the purchaser must first contact the dealer/installer from whom the fireplace was purchased.

This limited warranty will be void if the fireplace is not installed by a qualified installer and according to the installation instructions. Use of unauthorized components will make this warranty null and void.

This limited warranty also is void if the fireplace is not operated, at all times, according to the operating instructions furnished.

This warranty is limited to defects in material and workmanship. It does not apply to any product that has been subject to negligence, misapplication, improper installation. Remote control warranties are covered by Ambient Technologies, Inc., and are excluded from this Limited Warranty.

No person is authorized to extend the time of this warranty or to accept on Hussong Manufacturing Co., Inc.'s behalf any additional obligation of liability connected with the unit.

It is expressly agreed and understood that this warranty is Hussong Manufacturing Co., Inc.'s sole obligation and purchaser's exclusive remedy for defective fireplace equipment. Hussong Manufacturing Co., Inc. shall not be liable for any consequential, incidental or contingent damages whatsoever. The foregoing warranty is exclusive and in lieu of all other expressed warranties. Hussong Manufacturing Co., Inc. shall not be held to implied warranties, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. This warranty replaces all previous warranty policies.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

Hussong Manufacturing Co., Inc. reserves the right to make changes at any time, without notice, in design, material, specifications and prices. Hussong Manufacturing Co., Inc. reserves the right to discontinue models and products.

WARRANTY CONDITIONS & REQUIREMENTS:

1. You are the original purchaser. This warranty is not transferable.
2. Installation of the fireplace is performed by a qualified installer.
3. Installation and operation must comply with installation and operation instructions.
4. Paint and glass gaskets are covered for 30 days from date of purchase.
5. Components broken, (including glass panels), during shipping, careless handling of components, or defects resulting from improper installation, misuse of the fireplace and components are not covered under this warranty.
6. This warranty does not cover any part of the fireplace or any components which have been exposed to or submerged under water.
7. Hussong Manufacturing Co., Inc. must be notified by the dealer the fireplace was purchased from or a qualified installer or service technician of the defect.
8. Annual service of the fireplace as required in the installation manual, is performed by a qualified installer/service technician. (Copies of such service records may be required to claim a warranty.)
9. All previous warranty/service has been performed by a qualified installer or service technician. (Copies of such service records may be required to claim a warranty.)
LIFETIME WARRANTY

THIS LIFETIME WARRANTY COVERAGE WILL BE EXTENDED AS DESCRIBED BELOW PROVIDED ALL WARRANTY CONDITIONS AND REQUIREMENTS ARE MET AS OUTLINED IN THE 10 YEAR LIMITED WARRANTY POLICY.

LIFETIME WARRANTY COVERAGE

LIFETIME WARRANTY IS EXTENDED AS FOLLOWS: Hussong Manufacturing warrants to the original purchaser that the firebox, heat exchanger, fiber logs, burner tube and glass of this Kozy Heat fireplace will not be defective in material or workmanship under normal use and service for as long as you own this product. If any of these components fail due to defects in material or workmanship under normal use and service, Hussong Manufacturing Co., Inc. will, at its sole discretion, repair or replace the defective component. This LIFETIME WARRANTY does not cover any installation, labor, transportation or other indirect costs arising from defective components.

LIMITATION OF LIABILITY

This Lifetime warranty will be void if the fireplace is not installed by a qualified installer and according to the installation instructions. Use of unauthorized components will make this warranty null and void. This lifetime warranty also is void if the fireplace is not operated, at all times, according to the operating instructions furnished. This warranty is limited to defects in material and workmanship of components specified. It does not apply to any product that has been subject to negligence, misapplication, improper installation.

No person is authorized to extend the time of this Lifetime warranty or to accept on Hussong Manufacturing Co., Inc.’s behalf any additional obligation of liability connected with the unit.

Hussong Manufacturing Co., Inc. may fully discharge all obligations with respect to this Lifetime warranty by refunding the wholesale price of the defective component(s).

It is expressly agreed and understood that this Lifetime warranty is Hussong Manufacturing Co., Inc.’s sole obligation and original purchaser’s exclusive remedy for defective fireplace equipment. Hussong Manufacturing Co., Inc. shall not be liable for any consequential, incidental or contingent damages whatsoever other than those incurred by Hussong Manufacturing Co., Inc. to repair or replace the defective component. The foregoing warranty is exclusive and in lieu of all other expressed warranties. Hussong Manufacturing Co., Inc. shall not be held to implied warranties, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. This lifetime warranty replaces all previous lifetime warranty policies.

Hussong Manufacturing Co., Inc. reserves the right to make changes at any time, without notice, in design, material, specifications and prices. Hussong Manufacturing Co., Inc. reserves the right to discontinue models and products.

JUNE 1986

TO ACTIVATE THIS LIFETIME WARRANTY COVERAGE, THIS REGISTRATION CARD MUST BE COMPLETED AND MAILED WITH YOUR COMPLETED 10 YEAR LIMITED WARRANTY FORM WITHIN 30 DAYS OF INSTALLATION.
