THREE |

THREE WAYS TO INSTALL

Single-sided, Corner, or Bay Configuration.

Configured to the architecture, not the other way around.

A single-sided fireplace installation in a modern living room. The fireplace is a long, low, rectangular unit with a dark frame, set into a wall of large, dark, textured stone tiles. Above the fireplace, a large, dark, rectangular panel is mounted on the wall. To the right of the fireplace, a stack of firewood is visible. In the foreground, a low wooden coffee table holds a small potted plant and a white ceramic pot. The floor is covered with a dark, textured rug.

SINGLE-SIDED | Flush install in a flat wall. The fireplace becomes part of an architectural feature wall.

A corner fireplace installation in a modern living room. The fireplace is a long, low, rectangular unit with a dark frame, set into a wall of large, dark, textured stone tiles. The fireplace is positioned in a corner, with the front and one side open. To the right of the fireplace, a stack of firewood is visible. In the foreground, a low wooden coffee table holds a small potted plant and a white ceramic pot. The floor is covered with a dark, textured rug.

CORNER | Two-sided viewing tucked into a corner. The front and one side stay open, so the fire turns the corner with the room and stays in view from either approach.

BAY | *Three-sided viewing. Fire visible from three sides, the most dramatic configuration. The fireplace becomes the architectural pivot of an open plan.*
